

Santa Rosa Systems, Inc. Capabilities

About Santa Rosa Systems

Santa Rosa Systems brings together the best in equipment solutions with a unique expertise in material handling engineering. SRS has the ability to support new and innovative design and product development. With the legacy of some of the finest design engineers in the material handling industry, we have the experience to design and develop solutions for any application. Santa Rosa Systems brings together the complementary skills, and the proven track record necessary to meet and exceed every customer expectation. From equipment and controls to installation and after sales support, customers have found that they can rely on solutions from *Santa Rosa Systems*.

Total Equipment Solutions

- Full Manufacturing Capabilities
- Design
 - Prototype
 - Mechanical
 - Electrical
 - Software
- Simulation
- Production Engineering
- Quality Assurance
- Installation
- Commissioning/Start-up
- Training
- After Sales & Customer Service
- Facility Maintenance Programs

- Manufacturing capabilities to meet your requirements from simple weldments to complex equipment and machines.
- Full design capabilities to work with you every step of the way in developing a solution to your unique requirement.
- Simulation software allows complex testing of equipment solutions before production begins.
- Production Engineering allows us to bring your prototype to full production recognizing scale and production efficiencies.
- Quality Assurance shadows your project every step of the way from initial concept to installed productive equipment.
- Highly trained crews are available to ensure on-time installation, commission and start-up of your equipment.
- Training is available to bring your staff up to speed once the installation is complete.
- We will provide complete after-sales support for your product for as long as you own it. Technical advice, spare parts, preventative maintenance and even full facility maintenance can be offered.

Innovation

Santa Rosa Systems is providing innovation to the material handling industry through all aspects of our business.

- **Quality**

At SRS Quality is not a job, but a culture, which is based on efficiency, accountability and the understanding that the customer comes first.

- **Engineering**

Engineering is a key discriminator for SRS. With over 150 years of combined experience in the material handling industry, our knowledge extends beyond the machine design, into the applications and operations of our customers. If our standard equipment doesn't meet your needs, SRS can tailor a design for your operations.

- **Manufacturing**

SRS Equipment is designed and manufactured for the most severe unit handling applications. Our heavy duty designs and construction produce the most reliable equipment in the industry.

- **After Sales & Service**

The SRS After Sales & Service team is comprised of knowledgeable professionals who are available 24/7 to support your operation. Our technicians are cross-trained in SRS manufacturing operations in order to gain an intimate working knowledge of the equipment. SRS technicians are available to travel to your facility should any unexpected issues arise.

Santa Rosa Systems has an in-house staff dedicated to selecting or developing equipment solutions for your material handling requirements. Our engineers bring years of expertise to ensure the optimization of your company's material handling and processing applications. Featuring a full complement of engineering disciplines, controls specialists and design resources, we have successfully designed and manufactured thousands of cost-effective solutions for all facets of courier, warehousing and distribution material movement.

Santa Rosa Systems offers a complete family of loading and unloading equipment, from simple gravity flow equipment to powered multi-stage loaders and unloaders - all designed to streamline your loading and unloading operations, saving time and money. SRS equipment is built to the robust standards required for severe duty cycles and 'around the clock' operation, resulting in increased profitability for you the customer.

Santa Rosa Systems is committed to your project success and complete customer satisfaction. Working with SRS to fulfill your equipment needs assures you:

- An expert staff of Solution Engineers always accessible to you
- A cutting edge approach to automation and control products
- Vendor partnerships that minimize risk to schedule and budget

Santa Rosa Systems is dedicated to providing maximum value to our customers. We will work for you in developing a specific solution for your application, or apply any of our extensive line of existing products to meet your requirements. SRS will follow your project from initial concept through installation, start-up and beyond. We look forward to meeting with you to develop a *Total Equipment Solution* for your application.
